## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Noguchi (US 6,005,270).

Note that a “product by process” claim is directed to the product per se, no matter how actually made, *In re Hirao*, 190 USPQ 15 at 17 (footnote 3). See also *In re Brown*, 173 USPQ 685; *In re Luck*, 177 USPQ 523; *In re Fessmann*, 180 USPQ 324; *In re Avery*, 186 USPQ 161; *In re Marosi et al.*, 218 USPQ 289; and particularly *In re Thorpe*, 227 USPQ 964, all of which make it clear that it is the patentability of the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. Note that applicant has the burden of proof in such cases, as the above case law makes clear.

2. Regarding claims 1-4, Noguchi discloses a final product that is a thin film transistor comprising polysilicon (see Fig. 1; 31B), a charge storage region (Fig. 1; 22a, 32a, 23a, 33a), wherein the charge storage region is ONO-type (Fig. 1; 23a), and that the charge storage region comprises a floating gate (Fig. 1; 32a).

Art Unit: 2813

6. Regarding claims 5-7, Noguchi discloses an end product that is a monolithic memory array comprising memory cells and these memory cells comprising TFTs comprising polysilicon (Fig. 3A). The process is immaterial because the end product is a memory array.

7. Regarding claims 8-11, Noguchi discloses a thin film transistor comprising a channel region (Fig. 3A-B), a charge storage region (Fig. 1; 22a, 32a, 23a, 33a), wherein the charge storage region is ONO-type (Fig. 1; 23a), and that the charge storage region comprises a floating gate (Fig. 1; 32a).
